## SUMMARY

AI Automation Engineer with hands-on experience building AI agents, LLM-powered workflows, and scalable full-stack systems. Skilled in designing automation pipelines, integrating Claude API solutions, developing microservices architectures, and deploying cloud-based applications using Docker and Azure.

## TECH STACK

### AI & Automation

LLMs, AI Agents, Claude API, RAG Systems, Prompt Engineering, Workflow Automation, n8n, Make

### Languages

Python, Java, JavaScript, SQL, C#

### Backend & Architecture

Spring Boot, Node.js, REST APIs, Microservices, Gateway Architecture, JWT

### Frontend

React, Angular

### DevOps & Testing

Docker, Azure, Git, Selenium, MSTest, API Integrations

## EDUCATION

### AI Engineering Program

Dataquest

LLM Fundamentals, AI Applications, Machine Learning, Deep Learning, Embeddings, Vector Databases, RAG Systems, and AI Agents.

### Practical Software Engineering Studies

College of Administration (Mah'at)

2024 - 2026

## PROFESSIONAL EXPERIENCE

### BeyondCode

#### AI Automation Engineer

2026 - Present

- Developed AI-powered systems using Python and Claude API for intelligent resume processing and candidate analysis.
- Built and deployed autonomous AI agents to extract structured data and synchronize insights into Monday.com workflows.
- Engineered AI-driven candidate matching workflows and integrated LLM-based reasoning systems into production.

## PROJECTS

### AI-Powered Recruitment & Career Management Platform

Spring Boot • React • Docker • Azure • JWT

- Designed and developed a scalable recruitment management platform for employers, candidates, and institutions.
- Implemented Gateway architecture and distributed service communication with secure JWT authentication.
- Integrated cloud deployment workflows utilizing Docker and Microsoft Azure.

### TeamFlow - Full-Stack Team Management System

Spring Boot • Angular • JWT • H2 Database

- Developed a complete team and project management system with role-based access for Admins, Team Leaders, and Employees.
- Built workflow tracking, meeting management, and reporting modules with integrated AI-powered insights.
- Designed scalable backend architecture with secure API communication and clean separation of responsibilities.
